

## **SECTION 7.1 NPDES DISCHARGE PERMITS**

### **(WAC 463-42-435)**

NPDES permits will be required for stormwater discharges at all permanent facilities associated with the pipeline. The attached NOI forms the basis for this permit. The dates of start-up and completion for project construction have not yet been determined, and the SEPA review has not yet been completed. When the start-up and completion dates have been finalized and the SEPA review completed, a revised NOI will be filed. In addition, a completed erosion control plan will also be submitted with the revised NOI. The final NOI will also include published notices will accompany filing of the NOI which will include:

- A statement that coverage will be under the NPDES baseline general permit for stormwater discharges associated with construction activities.
- Name and location of the construction site(s).
- Name and address of Olympic Pipe Line Company (the applicant).
- A description of construction activities and discharge locations.
- The following statement "Any person desiring to present their views to EFSEC regarding this application may do so in writing within 30 days of the last date of publication of this notice. Comments shall be submitted to EFSEC. Any person interested in the departments action on this application may notify the department of their interest within 30 days of the last date of publication of his notice."

Additionally, temporary NPDES permits may be required for construction dewatering and for the hydrostatic test water discharge, unless these can be obtained as part of a State Waste Discharge Permit. Requirements for these permits include a description of the discharge location, timing, quality and quantity, all of which are not presently determined. If temporary permits should be required, the NOI and permit applications will be developed as needed.
